IMPORTANT INFORMATION

- Do not operate the CBLIFT0019 unit without attaching adequate counterbalance weights. Weight plates are installed to counterbalance the weight of the television/screen. If more than two weight packs are required, order the weight extension plate kit # 29909775. See the technical sheet for weight pack recommendations and ordering information. **IMPORTANT:** inadequate weight may cause the unit to lift too quickly. Too much weight will override the spring-action movement. - Minimum inside depth must be determined by components.
