APPLICATION

- Detail displays - Hotels - Cabinets - Under shelf lighting - Cove lighting

INCLUDED PRODUCT(S)

8 ft (2.4 m) length aluminum profile with opal lens. Included opal lens creates the no dot effect.

IMPORTANT INFORMATION

8 ft (2.44 m) long aluminum profile with opal lens. Opal lens was specifically chosen to offer a nice level of light to light up cabinets without the dot effect. The denser the lens, the less light that can pass through. For example, a clear lens will offer 96.5% translucency with only 20% diffusion (clear, meaning the lens is clean and the tape light is visible). The opal lens offers 65% translucency with 100% diffusion. Opal lens efficacy is 50% of the originally emitted light source. You will need to purchase an additional switch for your tape light to function. There are different options to choose from depending on the tape light you use. Please visit the lighting section at Richelieu.com for suggestions.

DISCLAIMER

Light output may vary depending on the LEDs used on your tape light (sold separately). LED tape light sold separately. You have many options to choose from-please visit the lighting section at Richelieu.com If you require any other length or lens please contact your special order desk As tape light widths and connectors can vary, please be sure that you have chosen the correct tape to fit your profile to achieve the right look for your design. There is an acceptable industry size variance. Our variance tolerance for the width its 0.009" tolerance and for the height 0.008" for this specific model. Other models may vary
