

Idrosiv Transparent Impregnator for Broadleaf Woods

Product # FLWW80025

DESCRIPTION

Impregnating woods with Idrosiv serves a protective and decorative purpose. It protects woods from weather for long periods. Its resistance to light and weather stops the wood from losing its natural color due to UV rays. The particular water-repellent treatment given by Idrosiv allows natural transpiration of the wood. The smooth and satin-finished surface does not crack and flake. Suitable for broadleaf woods.

TECHNICAL SPECIFICATIONS
