

Panolite Plus(MD) - MDF (1/4)

Product # N1497600PL

Thickness 1 3/4 in

Width 61 in

Length 121 in

DESCRIPTION

Lightweight panels assembled with honeycomb paper cell made from recycled fibres.

Hot-melt polyurethane glue (without urea-formaldehyde) is used during assembly.

ADVANTAGES AND BENEFITS

Considerably lighter than traditional panels, creating optimal ergonomics for the user as well as major savings in transportation costs.

TECHNICAL SPECIFICATIONS

Product #	N1497600PL
Collection	Standard
Finish	Unfinished
Material	MDF
Panel Type	Combcore +
Frame Direction	In the 97 in

APPLICATION

These lightweight panels are ideal for: - Cabinets, counters, and work surfaces - Shelves - Suspended ceilings - Point-of-sale displays - Residential, commercial, and institutional applications - Office furniture - Exhibition stands Edgebanding a Panolite honeycomb core panel is easy. After cutting your component, simply push the cardboard in or create space with a shaper on the panel perimeter, then insert a piece of wood at proper thickness so edgebanding can be glued on the entire surface. When the pushing method is chosen, we recommend using a PUR glue to ensure adherence to the dried PUR glue in the panel. A PVA glue is suitable when using a rotative tool that cleans the dried glue inside the panel.

IMPORTANT INFORMATION

Panels are unfinished.
